SO WHAT IS PI CRPTOCURRENCY?

Pi cryptocurrency is a digital currency allowing ordinary people to mine from their telephone.

In addition to that Pi mining is completely <u>free and it only takes a few moments</u> from your everyday life to contribute to the mining process.

The idea started in 2019 by 3 Stanford Ph.D. graduates;

- **Dr. Nicolas Kokkalis** (Ph.D. in Computer Engineering and teaches Decentralized Applications of Blockchain at Stanford)
- **Dr. Chengdiao Fan** (Ph.D. in computational anthropology, and her work for the Pi Network is focused on social computing)

The 2 of them met in Stanford and their common vision in combination with their different academic skills resulted in the creation of the Pi Network.
